ANNEX I: Partners’ dissemination activities during M1-36 in AIDA

ANNEX II: Oral and written inquires received and handled by the AIDA consortium

1. INTRODUCTION

This document presents the dissemination and communication activities conducted throughout the whole duration (36 months) of the AIDA project and reports on their outcomes and effectiveness.

Dissemination and communication activities in AIDA have commenced from the very beginning of the project in an aim to raise awareness of the target groups on the objectives and the upcoming activities of the project, from which they could benefit, as well as to engage them in those activities. Therefore, a visual identity and various means and tools of dissemination and communication have been developed as part of the dissemination and communication work package and utilised by the consortium partners to date. A Dissemination and Communication Strategy (D7.1), which was developed at the beginning of the project as an intra-consortium document, has served as guidance for the AIDA partners to conduct more effectively the dissemination and communication activities.

Smart performance indicators were set at the beginning of AIDA for measuring the effectiveness and impact of the different means and tools for communication and dissemination. The combination of online and offline means and tools has proven to be effective and allowed reaching most of the performance indicators by the end of the project.. The current report presents these in more detail in the following pages.

2. CONTEXT AND BACKGROUND

The achievement of the AIDA project's objectives is intrinsically linked to the engagement of the project's target groups in the project activities and their exploitation of the project's results. Efficient and quality communication and sound dissemination has therefore been a key requirement in AIDA. To engage the target groups in the project's activities, partnership agreements and contacts are being established as part of WP2-WP4 activities. Additional, complementary top-down dissemination is also being implemented under WP7 (Dissemination and Communication) to ensure further engagement of the target groups in AIDA's activities and wider exploitation of the project's results.

Raising awareness towards nZEB among local authorities and building planners is a key factor in reaching the objectives of AIDA. Therefore, the main target groups of AIDA are municipal representatives as market multipliers on the demand side, and architects and master-builders on the supply side. These two groups are briefly described below.

➤ **Mayors, municipal representatives and local authorities**

Municipalities play an important role in achieving EU's 20-20-20 targets. They have the power to contribute to energy savings and the rationale use of energy as well as the use of RES but often lack sufficiently high quality information to empower them to take ambitious decisions in this respect. Even if decision makers at the municipal level want to start an energy relevant action, they often have no idea how to begin. Therefore, AIDA offers essential information to municipalities, supports them in setting up own ways and strategies to contribute to the 20-20-20 targets.

➤ **Architects and master-builders**

Architects and master builders play an important role in building design process. Very often the design of the whole building or its components is not up to the state of the art respectively the interaction of components, e. g. the heating system, is inadequate, sometimes by reason of tradition, lack of knowledge or other causes. In many cases building owners trust their planners and their design, as well as their constructors and their skill, especially in the private home sector. It is not appropriate to teach and inform all building owners but essential giving information on integrated energy design of buildings to architects and master-builders, who are engaged in the study trips.

In addition to these two target groups, AIDA also liaises with key actors; these are **associations of municipalities** and **associations of building professionals** on regional, national and international level. These associations are vital to spread the idea of nearly zero-energy buildings among municipalities and building professionals in Europe

Various **means and tools of dissemination and communication** have been developed as part of the dissemination and communication work package in AIDA. The following specific means and tools have been conceived and utilised by the partners:

- Project homepage (AIDA website)
- Project newsletter
- Project brochure
- Project poster
- Social media tools

The project consortium have been utilising these tools and means on a regular basis in reaching the relevant target groups. These tools are also used through on-line as well as off-line media at various occasions. The partners have also used opportunities to attend relevant events and represent the AIDA project by distributing dissemination material or holding poster presentations, or presenting AIDA via speeches and lectures. In addition to these activities, **specific targeted actions** have been planned and being delivered:

- Awareness raising campaign for architects and master-builders;
- Dissemination beyond the targeted countries (with special focus on CEE region);
- Presentation of AIDA's results and liaison with other initiatives.

A **visual identity** for AIDA has been developed right after the project commenced and related graphical elements were integrated into the specific dissemination and communication tools.

A **Dissemination and Communication Strategy (D7.1)** for AIDA was developed early in the project to ensure that the different target groups are appropriately approached by using the most effective and relevant tools in line with their needs. This has contributed and still is contributing to achieving the expected impact of the central activities of the project that aim to create local seeds for nearly zero energy buildings (nZEB) via study tours, assistance for municipalities and promotion of existing tools. The implementation of the Strategy is continuously monitored and fine-tuned according to whether the foreseen impact is achieved (against various key performance and smart indicators) and whether there is a need for adaptation in approach.

The following section describes the dissemination and communication activities and their outcomes in AIDA throughout the whole duration of the project.

3. THE STATE OF PLAY IN DISSEMINATION AND COMMUNICATION IN AIDA

The AIDA consortium agreed early on at the proposal stage that the mandatory dissemination activities will be brought to a new level by utilising not only the traditional means of disseminating and communicating the project – such as brochures, leaflets, posters and newsletters – but also through various online channels such as social media tools and stakeholder platforms. To this end, both approaches have been intensively used and their effectiveness is summarised in this section. Smart indicators have been set at the beginning of AIDA for measuring the effectiveness and impact of the different means and tools used for communication and dissemination. A comprehensive table on this is available in the Dissemination and Communication Strategy (D7.1) document, and the related achievements are summarised throughout this section as well as in Annexes I and II of this report.

3.1 Offline means and tools

3.1.1 AIDA leaflet/brochure

A project brochure (hardcopy) was produced right after the project started to be distributed at the study tours and workshops as well as at other relevant events that have been attended by the partners. Both versions of the brochure are available at the public section of the project website. The AIDA brochures contain the overall aim of the project and the actions that are undertaken to achieve this aim, as well as results from completed WPs and the expected outcomes from WPs that are active at the time. It also contains a link to the homepage of AIDA, the general inquiry e-mail address as well as the contact details of the partners. The various editions of the brochures have been produced and printed in English, and the local partners assumed the task of translating the brochure (German, Hungarian, Greek, Italian, French, Spanish and Catalan).

The translated versions yield the possibility to actively distribute the brochures electronically to the various target groups (municipalities, architects and master-builders, associations of municipalities, associations of building professionals, coordinators/partners of other relevant projects) and relevant platforms in the project countries using their native languages.

Such actions were designed in order to increase awareness and visibility of the project and its activities as well as to enhance engagement of the intended target groups in the project's activities. Annex I to this report provides a full list of events where the AIDA consortium attended and participated during the 36 months of the project and distributed the AIDA project brochure and informed the target groups.

There was a general expectation on the partners' side to generate a notable increase in the number of hits to the project website following the dissemination of the brochures at the relevant events. An increase in the number of downloads from the website was also expected, and as the statistics show, to a large extent achieved.

3.1.2 AIDA Newsletter

The **first** issue of the AIDA Newsletter (electronic) was developed in April 2013 to be distributed to the online subscribers as well as to be available for download at the website, containing all the information available in the most recent brochures and additionally:

- Summary of progress of all WPs, including all the deliverables produced since the last edition of the newsletter;
- Reports of activities of each partner since the last edition of the newsletter;
- Advertisement of relevant forthcoming conferences / meetings; and
- Advertisement of forthcoming study tours, etc.

The newsletter was specifically promoted to the main target groups (municipalities and architects and master-builders) as it contained detailed information on the project's activities and results. Its impact is envisaged to result in the enhanced engagement of the intended target groups in the project's activities, and also in an increased uptake of the methods demonstrated and promoted by the project.

The **second** issue of the newsletter was released in June 2014 with a significantly updated content for the benefit of the AIDA subscribers whose number had been more than doubled since the previous sending.

It featured the event participated by the project partners and the upcoming study tours at that time and also highlighted the outreach of AIDA towards other, similar initiatives and supporting bodies in the realm of nZEBs such as the Nearly Zero Energy Buildings Open Doors Days project or the Manage Energy portal just to name a few.

The newsletter also included some useful information of the gEnergy tool developed by AIDA's UK partner, greenspaceLIVE. A trial subscription option to this energy evaluation toolkit was also offered for the subscribers and a link to demonstrate the basic features of the software.

The **third** and final issue of the newsletter was populated towards the very end of the project focusing more on the summary and sustainability of the actions carried out. A separate chapter is dedicated to list and explain those national contact points for each partner country that have been identified and engaged within the frame of WP5 to make it sure that AIDA's efforts and achievements will carry on for the future benefit of all parties (municipalities or private individuals alike) who want to deal with nZEBs.

This final edition also highlights those deliverables which have been made publicly available on the project website on each of the partner country's languages and which will help familiarising the interested public on specific ideas such as Integrated Energy Design (IED).

3.1.3 Dissemination beyond the targeted countries

The AIDA consortium was contacted in November 2012 by the Energy Efficiency Agency of the Ministry of Economic Development of Kosovo with a request to organise a workshop on nZEB in Prishtina. In line with the project's aim to extend the project activities and raise awareness of the project and its results beyond the target countries, in particular in CEE/SEE, the AIDA project coordinator, in conjunction with Geonardo (P6) and CIMNE (P3) has organised a regional workshop in Prishtina on 19th September 2013 at the premises of the Government of Kosovo.

The Regional Workshop "Energy efficiency and renewable energy in public buildings in SEE" was attended by approximately 30 participants coming predominantly from Kosovar institutions but also included representatives from Albania, Serbia and Macedonia. The half-day event aimed to promote the use of renewable energy and energy efficiency in public buildings in the Balkan region by informing both authorities and local building professionals about the costs and benefits of switching to alternative sources of energy, integrated energy design (IED) principles and using energy efficiency measures.

The event was opened by Mr. Denion Galimuna, Political Advisor at the Ministry of Economic Development, and followed by technical presentations of Mr. Raphael Bointner, AIDA Project Coordinator, Mr. Jose Santos of CIMNE and Mr. Avni Sfishta, GIZ's Country Coordinator for Kosovo. The workshop was very interactive and the presenters raised many issues about the possibilities of implementing energy efficiency measures in public buildings in the Balkan region.

In addition to this workshop in Kosovo, as AIDA has a special dissemination focus on the CEE region, Mr. Raphael Bointner held an AIDA presentation in the South-East European Eco forum entitled "Nearly Zero-Energy Buildings – why?" in Sofia on 29 May, 2013. The target audience were building professionals, science and Bulgarian officials.

Beyond the scope of CEE dissemination, Mr. Raphael Bointner conducted an AIDA side-workshop for municipal representatives from all over Europe in Energy Cities' annual rendezvous entitled "Inventing nearly Zero-Energy Buildings for tomorrow" in Växjö, Sweden on 25 April 2013 with a very positive feedback from the audience.

To push dissemination in the CEE region even further an online survey was elaborated to check the knowledge of public authorities on nZEBs in general and some of their country specific rules and requirements and also to promote AIDA among them. The consortium decided to conduct such an online survey instead of a workshop similar to the one in Pristina, because after due consideration the effort /impact ratio was concluded to be the most efficient this way, since AIDA did not receive any similar request about a bottom-up approach like the one from Kosovo, from any of the targeted CEE countries.

The survey questionnaire was drafted by close cooperation between AEE Intec and Geonardo. Once ready it was circulated among Geonardo's relevant partners from its other ongoing project, called Geothermal Communities (GEOCOM). By doing so, the questionnaire was sent to the following municipalities in the CEE region: Mszczonów (PL), Galanta (SK), Oras Sacueni (RO), Subotica (RS), Kocani (MK) and Mórahalom (HU). Partners at these municipalities were requested to fill the questionnaire and then forward it to at least 5 fellow municipalities they maintain a close cooperation with.

Unfortunately this survey did not bring many results. On one hand the AIDA consortium experienced severe difficulties during the whole project when it came to motivating and mobilising its target groups to fill in questionnaires. No matter if it was an on-the-spot survey during the study tours or the so called one year after questionnaire for which the average responds received was less than 5%. On the other hand it was not quite realistic to expect municipal interaction from these – from the project's point of view – randomly selected municipalities that have no previous information on AIDA especially if you compare to the efforts invested into engaging municipalities within AIDA. It took multiple meetings and emails to step forward one baby step at a time.

Though the survey was anonymous the few responses received was most likely sent by those municipalities who were targeted because of their involvement in GEOCOM, because they did not want to let down their project partner Geonardo.

3.2 Online means and tools

3.2.1 AIDA website

The AIDA website (www.aidaproject.eu) was launched in May 2012, shortly after the project's kick-off meeting. The website has been online for the whole duration of the project and the web site statistics have been monitored since its launch. The number of visits to AIDA's website has consistently increased over the first three months of its launch, later showed an exponential increase upon the launch of further web-based tools (e.g. Facebook, Twitter, LinkedIn, etc.) and with the start of the Study Tours (see below).

For 2015
(please note that the project concludes on March 31)

Total number of visits at AIDA’s homepage since May 2012 to date reached around 45,800 of which around 25.300 are unique visitors, the value of which is exceeding by approximately 230% the smart performance indicator of around 300 visits/month (total 10.800) indicated in the Description of Work.

The value of **unique visitors** refers to the number of different IP addresses which were used to visit the AIDA web site, while the number of visits describes the total number of visits which were carried out in the given period including multiple visits from the same IP address. The pages value explains the total number of opened sub-sites within aidaproject.eu, while the bandwidth refers to the total amount of data which was downloaded from the site, including the available deliverables, brochures, newsletters, etc.

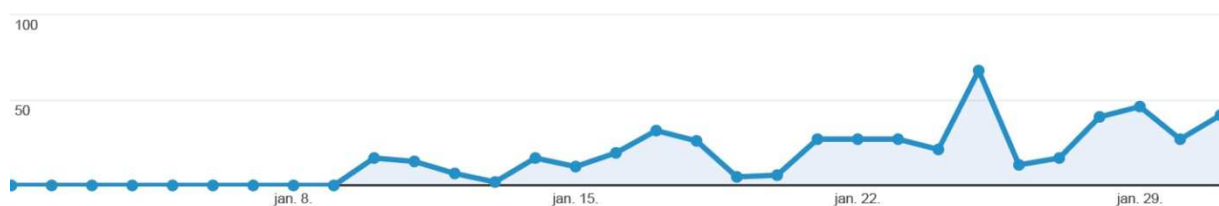

Based on the statistics, the top 10 visitor countries to www.aidaproject.eu are as follows as of 03.17.2015:

1. Greece
2. Spain
3. China
4. Ukraine
5. Germany
6. France
7. Italy
8. USA
9. UK
10. Austria

It can be seen that the project's outreach does not confine to the **participating countries**, but it has already managed to sparkle some interest towards its activities at other EU countries as well as at countries beyond the EU.

The following graphs provide some insight to the monthly distribution of the site visits for the last 27 months of the project. The Google Analytics tool had been assigned to the site in January 2013, that is the reason such data is not available for earlier periods. Some big fluctuations can be observed in different months; these are in correlation with the specific activities of AIDA carried out for the project's target groups. For instance, some of the highest peaks (indicating larger number of site visits than the average) correspond to the events organised by the AIDA consortium, and the sharp increase in figures indicate a raise in awareness and interest in the project and its activities. Some event such as the two workshops on 19th September 2013 in Bolzano, Italy and in Pristina,

3.2.2 AIDA in social media

AIDA has been active in social media, in particular on LinkedIn, Facebook and Twitter. Our experience has shown that, being a professional platform hosting pertinent groups, LinkedIn has the potential to generate a bigger impact. AIDA web statistics show that, although in general Facebook is amongst the top external pages to generate visits towards the AIDA web site, targeted activity on LinkedIn generates higher number of visits. Twitter so far has shown limited impact.

Examples of AIDA's LinkedIn activity under relevant groups

AIDA on Twitter

Currently, AIDA has 138 followers on Twitter, most of them which are entities of high relevance such as (BPIE Buildings EU, BUILD UP, EnRiMa) as well as others with a potentially high multiplier effect and further outreach (ClimAbita Foundation, EBTC). Since the launch of the Twitter account AIDA has posted 324 tweets and initiated to follow 129 accounts. AIDA's Facebook and Twitter accounts are interlinked, allowing to automatically tweet the relevant Facebook posts, and providing cross-reference in order to attract more followers to both platforms.

AIDA on Facebook

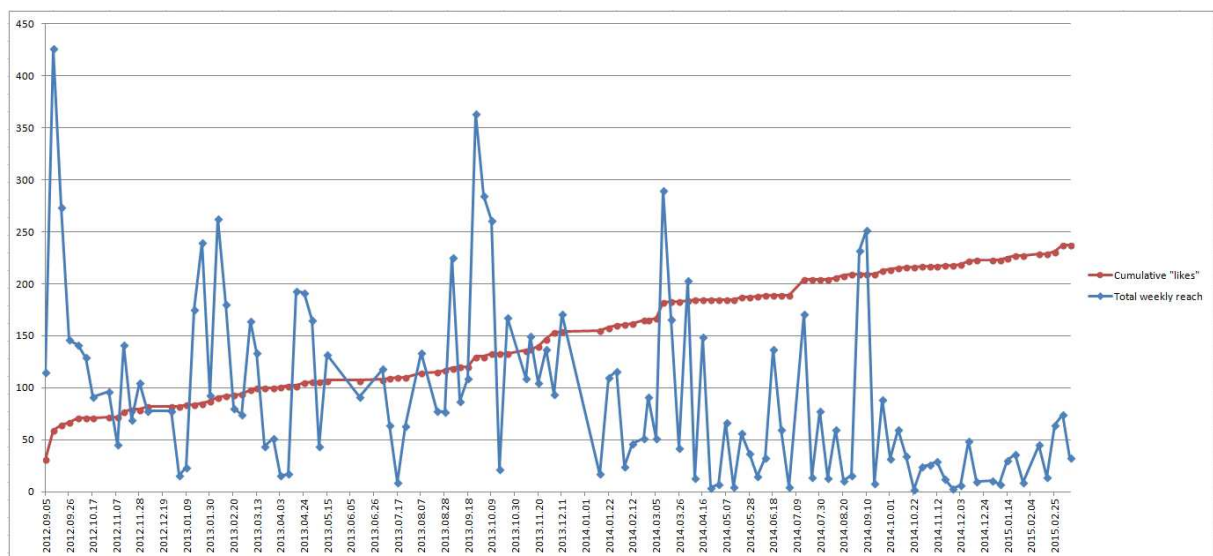

Currently the dedicated AIDA Facebook page has 227 "likes" which shows a steady increase since its launch (red line on the graph at the following page). We experience occasional boosts when a larger number of "likes" are received than usual in a short period, which usually corresponds to some AIDA related activity where the project is promoted such as a study tour or workshop. Based on weekly statistics provided by Facebook it can be concluded that the Facebook site has reached over 10500 people since the launch of the site till the end of the project (this value was calculated by adding the values for each weeks' "weekly total reach"). Please note that these statistics are very basic and do not include tracking of IP address or anything like that which would allow to filter the data meaning that this value may contain people who were reached more than once, however the peaks clearly

indicate that in certain periods the interest generated towards the project is way higher than average.

Content creator rights have been granted to all of the partner institutions which allow a much more efficient and broader campaign on Facebook in the national languages maximising the potential outreach of the posts in the relevant target groups.

The graph below shows the dynamics of interest generated towards the projects on Facebook.

Weekly total reach: The number of people who saw any activity from AIDA's Facebook page including posts, posts by other people, Page like adverts, mentions and check-ins.

3.2.3 AIDA on the WEB

AIDA partners have been very active in disseminating and promoting their project-related activities especially taking advantage of not only the social media platforms but also other online media channels. The study tours and workshops are intensively promoted on national web sites targeting relevant blogs, online papers and the websites and networks of their partners. Annex I to this report summarises all the dissemination related activities for the first 18 months of the project; it features a large number of online media appearances which were to raise awareness of the project's activities in the partner countries. It also includes a number of conferences and national workshops; however these are not as numerous as their online counterparts. On the next page is a sample of the broad selection of such media coverage.

National Study Tour of two social housing buildings in Mataró: Meléndez Valdés and La Llantià; Spain

21 May 2013
Type of Event | Other
City | Mataró (Spain)
Geographic Coverage | International
Theme | Controls, energy management systems, Energy efficiency
General

Target Group | Local/regional/national authorities and facilitator
Event Languages | English
Organiser | AIDA PROJECT
Event website URL(s) | http://aidaproject.eu/study_tour_1850/
Submitted by | Meredith Davis (CMRE / Building Energy and Environment)
Tags | Social housing | building energy efficiency and performance

The AIDA PROJECT presents the first two National Study Tours in Mataró. Both are social housing buildings which also have local company PUMSA. The guide for this study tour will be the architect Lluís Guzmán and construction phases (Duran & Grau designed, constructed and commissioned will be experts).

The study tour is free. Previous registration is required.

Illustrations)

THE AIDA PROJECT supports building professionals in the design and construction of zero-energy buildings (nZEB). AIDA runs activities to promote innovative buildings, sessions to learn about best practice innovative design software and active support for many more. AFFIRMATIVE INTEGRATED ENERGY DESIGN ACTION

responsable del projecte i de la direcció d'obra, explorant, entre d'altres aspectes, les capacitats constructives i postea en funcionament.

Workshop: Eines d'avaluació per edificis d'energia quasi nul·la - nZEB.
Data: 22 de Maig de 2013.
Inscripcions i més informació: http://aidaproject.eu/study_tour_1850/
L'Institut de Recerca en Energia de Catalunya - IREC organitza el workshop "Eines d'avaluació quasi nul·la - nZEB", en el marc dels projectes europeus AIDA (IEE) i MARIE (Programa IED) centrats en temes de eficiència energètica als edificis. Es tracta d'una oportunitat única i exclusiva de eines d'avaluació i simulació energètica a diferents escales (edifici i urbana). Veure programa feu clic aquí

Vista tècnica al Banc de Sang i Teixits de Catalunya.
Data: 29 de Maig de 2013.
Inscripcions i més informació: http://aidaproject.eu/study_tour_1850/
La tercera visita tècnica nacional del Projecte AIDA, es farà a l'edifici Dr. Frederic Duran i Jaume al Banc de Sang i Teixits de Catalunya, un centre de referència per al processament i emmagatzematge de cèl·lules mare.
La visita serà guiada per representants de l'equip del projecte i de la direcció d'obra (SA&S), responsables de la gestió energètica. Els participants rebran qualsevol informació que els caracteritzi i que ha estat al capdavant del projecte, i les principals innovacions i resultats energètics de con-

AIDA
AFFIRMATIVE INTEGRATED ENERGY DESIGN ACTION
www.aidaproject.eu

With almost two years into it, the AIDA project (Affirmative Integrated Energy Design Action) keeps enabling its wide array of activities targeting building professionals and European municipalities in order to increase the market penetration of nearly zero energy buildings (nZEB).

As of today, the project has reached out to 1500+ people with more than 400 visitors to the 20 study tours organized at the 15 different innovative buildings within the seven partner countries involved in the initiative.

In addition, more than ten municipalities are currently involved in the complementary SEAP (Sustainable Energy Action Plans) actions within the project and towards the benefits of the Integrated Energy Design method delivered at a local scale by local professionals.

Join our upcoming AIDA events!

- local study tour in Valence, France, on Feb. 11, 2014

Hogyan csökkentse az épület energiaigényét a legmodernebb technológiákkal?

Épület-szintű energiahatékonyság

2013.szeptember 10-én kerül megrendezésre az AIDA projekt keretében a második hazai, épületátotással egybekötött workshop, amelynek fókuszában a közel nulla nettó energiaig, nem lakáséle épületek állnak.

BUILD UP platform activities

Events organised by the AIDA consortium feature frequently the BUILDUP platform which is intended to reap the benefits of Europe's collective intelligence on energy reduction in buildings for all relevant audiences. It brings together new practitioners and professional associations while motivating them to exchange best working practices and knowledge and to transfer tools and resources. In the first period of the project BUILDUP appearances were limited to announcing and advertising the study tours mainly in Spain and in Austria and Italy.

The screenshots display the following content:

- Top Screenshot:** BUILD UP logo and navigation menu. Title: "AIDA - Affirmative Integrated Energy Design Action - First study tours".
- Second Screenshot (Left):** Event details for "National Study Tour of the Blood and Tissue Bank of Catalonia; Spain". Date: 29 May 2013. Location: Barcelona (Spain). Submitted by: Raphael E.
- Second Screenshot (Right):** News article titled "AIDA Project's upcoming activities in Spain announced: National Study Tours and Workshop of Evaluation tools for nZEBs". Posting Date: 16 May 2013. Countries: Spain.
- Third Screenshot (Left):** News article titled "Promoting Integrated Energy Design and SEAPs among project". Submitted by: Meredith Davis (CIMNE / Building Energy).
- Third Screenshot (Right):** News article titled "On the Forefront of nZEBs in Europe: AIDA Project". Submission URL(s): http://www.aidaproject.eu, http://www.facebook.com/aidaproject2012. Source Languages: English. Additional documents: AIDA article la.pdf (444.19 KB).
- Bottom Screenshot:** News article titled "The AIDA PROJECT support zero-energy buildings (nZEB) innovative buildings, sessions innovative design software and For more information on the p". Submission URL(s): http://www.aidaproject.eu, http://www.facebook.com/aidaproject2012. Source Languages: English. Additional documents: AIDA article la.pdf (557.81 KB).

The project activities recently got to the point when the conclusions of the main technical work packages could be summarised in a number of articles delivered by AIDA's key partners, EURAC of Italy and CIMNE of Spain. These articles are published on BUILDUP! and readily available for everyone who is interested in the concept of delivering integrated energy design to municipalities as well as carrying out nZEB tasks as part of a SEAP. In addition AIDA's online energy evaluation tool provider, greenspaceLive also features in these articles bringing some cutting edge solutions into the attention of the readers of BUILDUP.

4. CONCLUSIONS

In light of the overall status of the performance indicators, it can be concluded that the effectiveness and impact of the dissemination and communication activities in AIDA have been good throughout the whole duration of the project. Partners' activities have covered appropriately the regional dissemination potential in terms of participation in conferences, promotion of the project to the target groups and liaison with other relevant stakeholders (for more details, please refer to Annex I and Annex II of this report).

The project's international exposure was also excellent and in the second half of the project the consortium managed to tackle the issue of "reaching the international professional community. With multiple international study tours organised in the last quarter of the project in Greece, France and Hungary, some of them to visit neighbouring countries within the frame of a multi-day event supports this improvement.. The AIDA website started to host greenspacelive's online tools (<http://aidaproject.eu/e-tools.php>) early on in order to generate more interest towards this aspect and towards the project in general especially among the architects and energy experts, who may find these easy to use web tools in their daily jobs.

As a result of intensifying certain project activities in the second 18 months the consortium managed to reach beyond most of the initially set key performance indicators. This outcome can be directly linked to the increased activity on the social media platforms (Facebook and Twitter posts promoting and advertising the events, etc.), hence the higher traffic. Furthermore, various national and international online and offline coverage of the project become more frequent also as a result of increased project activity.

The partners attended a high number of relevant national, regional and European events to promote AIDA and its activities to the target groups. Annex 1 on the following pages provides a complete list of the dissemination activities carried out and event attended by the consortium during the 36 months of AIDA

During the proposal preparation phase of AIDA a number of key performance indicators had to be defined to measure the project's performance against at the end. These KPIs were mainly related to the dissemination activities of the project, and they were closely monitored throughout the project's duration in order to allow the consortium to take corrective actions ensuring the successful delivery of these figures.

One of the main interface of the project towards the public and towards the designated target groups was the project's website which was planned to have about 300 visits/month average from start to finish. The total hit counter on the very last day of the project was at 25756 which is divided by 36 gives 715, that is way more than double than the initially set value.

There was also an estimation of 20 media items being released by the end of AIDA. In that regard the project also overachieved its set target by having almost triple as many (52 altogether) media items, primarily on-line and printed articles released on AIDA and its goals. An additional KPI was linked to the newsletter subscribers, who expressed their interest towards the project news and evolution by subscribing to receive the project newsletter on an

annual basis. On March 31, 2015 the number of subscribers is at 838 which is well within the range of 500-1000 promised before the project commenced.

A novel approach in dissemination was to extend the project's outreach to the popular social media platforms to take advantage of the wide outreach such tools offer. AIDA's penetration on Twitter needs to be mentioned as a particularly effective tool promoting the latest news and features. The project gathered 140 followers, all of whom are very relevant from the project's topic point of view (discussed earlier). On the other hand it is quite hard to give an estimation on the number of people reached via this tool, since the number of users linked to a specific hashtag (#) is not openly available. (If you post on Twitter with a hashtag, everyone who set that particular hashtag, e.g. #nZEB) will receive notification about your updated status or tweet.

The list in Annex 1 is obviously non-exhaustive. However it gives a good idea about the success of the complex dissemination activities that were devised and carried out within AIDA accompanying the delivery of its core objectives in supporting the market entry of nZEBs in Europe.

CASA&CLIMA n.52 Dicembre 2014	Publication	Article in the national periodical about high energy efficiency buildings	EURAC	Increase the knowledge on nZEB and high energy efficiency buildings. Presentation of the results achieved within AIDA project http://www.aidaproject.eu/downloads/19/Casa&Clima_Completo.pdf	Dissemination Presentation of the result achieved within AIDA project
MODULO In phase of publication	Publication	Article in the national periodical about architecture	EURAC	Increase the knowledge on nZEB and high energy efficiency buildings. Presentation of the results achieved within AIDA project In phase of publication	Dissemination Presentation of the result achieved within AIDA project
Cooperation and consultancy	Oral	Planning of nZEB school renovation	AEE INTEC	Experience overheating, energy performance	Cooperation with architect
Cooperation	Oral	Study tours, success examples	AEE INTEC	Cooperation with other project, sharing experience, buildings	Knowledge exchange when possible
Partnership	Oral	Study tours	AEE INTEC	Cooperation in study tour planning, sharing building examples	Cooperation, joint next study tour
Advice and Support	Oral	Workshop	AEE INTEC	Support in using the presented tool in collaboration with a municipality	No outcome
N/A	Cooperation and consultancy	Planning of nZEB school renovation	AEE INTEC	Experience overheating, energy performance	Cooperation with architect

N/A	Cooperation	Study tours, success examples	AEE INTEC	Cooperation with other project, sharing experience, buildings	Knowledge exchange when possible
N/A	Advice and Support	Workshop	AEE INTEC	Support in using the presented tool in collaboration with a municipality	No outcome
N/A	Partnership	Study tours	AEE INTEC	Cooperation in study tour planning, sharing building examples	Cooperation, joint next study tour
N/A	Consultancy	Ventilation systems for school building	AEE INTEC	Experience ventilation systems and units	Cooperation with municipality and school, installation of ventilation units
N/A	Cooperation	Study tour and workshop	AEE INTEC	Cooperation with IEE project SUSTAINCO to organise a joint event	Cooperation, joint study tour incl. workshop
N/A	Advice and support	Energy improvement of municipality	AEE INTEC	Possible measures to reduce the energy demand of the municipal buildings	Joint meeting but no further outcomes
N/A	Cooperation and consultancy	School renovations	AEE INTEC	Experience overheating and energy performance of renovated school buildings	Joint meeting and discussion of further cooperation
Kiss-JánosFerenc, Magyar ZöldkeresztEgyesület	Oral	Study tour	Geonardo	Cooperation along with a third party to refurbish a number of school buildings at small communities of a few hundred inhabitants	Meeting was initiated with the third party (KlébelsbergIntézmény fenntartóKözpöt) but no further action taken due to the lack of interest.
Faragó Karolina, NémethJózsef	Oral, E-mail	Study tour	Geonardo	EDF DÉMÁSZ one of the largest electricity provider offered its connections and links to 140 Hungarian municipalities	A mutually beneficial setup has to be conceived to make the efforts worthwhile for EDF's point of view too, discussions are still on

KomlósFerenc	Oral	Study tour	Geonardo	He is in the heat pump business and was wondering about potential future cooperation	none so far
Friedman Ani, Magyar PasszívházSzövetség	E-mail	General	Geonardo	MAPASZ invited Geonardo to attend the 6 th Hungarian Passive House Conference for networking purposes and to get the latest updates in the industry	Few delegates on study tours
VadovicsKristóf, Greendependent Institute	E-mail, phone, oral	General	Geonardo	Cooperation between the nZEB Open Door Days project and AIDA to improve the visibility of the two projects	Cross linked dissemination of relevant events at the projects' websites
Bartomeu Casals Piñol	Oral, e-mail	Study tour	IREC	Want to discuss about the possibility to organize a Study Tour in EspaiZero building (They have monitoring data and mane list of innovation and impletion concept in nZEB).	Planned the 5th Study tour to EspaiZaero to next November 2013
Leticia Ortega, Dr. Architect Departamento de Vida Útil, Rehabilitación de edificios - InstitutoValenciano de la Edificación (Department of Service, Life Building Retrofit - Valencia Institute of Building) www.five.es	E-mail	General	IREC	Interest in collaborating with IREC in the framework of AIDA project. She explain that the Building Institute is participating in the project Power House Nearly Zero Energy challenge (http://www.powerhouse europe.eu/), related to nZEB buildings (monitoring 5 pilot cases-new and rehabilitation NZEB and training courses to master builders and owners)	Referral to AIDA homepage and sent information about the project and next activities. According to be in contact to discuss possible ways of collaboration.
Monica Prats (Export Advisor) DelegaciónComercial de Dinamarca- España Trade Commission of Denmark -Spain-	E-mail	Response a mailing about next ST in Spain.	IREC	She asked us for English dissemination about the Activities of Aida in Spain.	Sent information about the next activities in English version, in special the International events in Spain,

Ramon BarnadaLópez; Gremi de constructorsd'obres. www.gremi-obres.org	phone, oral	Response a mailing about next ST in Spain.	IREC	Interest in the dissemination of AIDA project and activities (ST and WS) addressed to the unionized members.	Referral to AIDA homepage and sent specific information about the project and next activities related to this target group.
Lola Berga Secretary of Confederación de Empresarios de la Construcción de Aragón. Confederation of Construction Entrepreneurs of Aragón.	E-mail	Response a mailing about next ST in Spain.	IREC	Interest in the registration of next AIDA ST and WS between the members of the Confederation of Construction entrepreneurs.	Referral to AIDA homepage and sent information about the project and next activities (2 registration have been made).
Sándor KASZA	E-mail	general	IREC	Interest in participate as a building pilot in the AIDA project with the Zala County NP Dev. Co (owner of ZEB office building)	Referral to AIDA project has not any Pilot Actions, but inform him about the potentially the building can be a study tour in Hungary. Sent copy and present Hungary partner: Geonardo Environmental Technologies
Toni Montiel Portella	E-mail	Study tour	IREC	Interest in the AIDA Project and potential collaboration in his projects in the framework of AIDA and financial sources.	Toni Montiel Portella
Said OULD AMROUCHE	E-mail	general	IREC	Interested in AIDA project, to join a proposal using integrated solar photovoltaic in buildings (BIPV) with the CDER (Centre de Développement des Energies Renouvelables- Algiers, Algeria	Referral to AIDA web deliverables, concept and next activities.

Marcos António Nogueira -Iradiare	E-mail	general	IREC	Interested in providing demonstration sites and combined with funding/ financing in the AIDA project.	Explain the objectives of AIDA project and referred to AIDA web deliverables, concept and next activities.
BOSCH BATLLE CONSTRUCCIONS	E-mail	Study tour	IREC	Interest in the AIDA Project and others projects related retrofitting in Residential sector.	Referral to AIDA web deliverables, concept and next activities and to MARIE project (MED)
Green Building Council of Spain	E-mail	general	IREC	Interesting in our dissemination or spread about the student's competition into the Congress WSB14	Referral to our participation in the Congress and that we have made dissemination refer to the event into our AIDA participants.
ICAEN –Catalan Institute of Energy	E-mail	general	IREC	Interesting in promote the AIDA project in the web of ICAEN, as a project related to promoting nZEB-NZEB initiatives	Sent a resume to the AIDA project to publish on line (ICAEN web) and link with CIMNE to possible national contact point
Mr Pavlos Kamaras Ms Vassilopoulou	Oral, phone	General	CRES	Cooperation of 21OTA to promote nZEB in member municipalities Request to inform municipalities	Meeting with municipalities, Promotion of AIDA material Contacts/call to members for joining AIDA
Mr Karonis	Phone	General	CRES	Response to 21OTA call Interest in cooperation Municipality of Irakleio	Municipal decision to join AIDA
Mr. Thomas Chrissafis	Phone, e-mail	General	CRES	Response to 21OTA call Interest in cooperation Municipality of Galasti Discussion about new kindergarten to be constructed	Municipal agreement to join AIDA
Ms Eleni Varvareizou	Oral, phone, e-mail	General Study Tour	CRES	General Cooperation with municipality PavlosMelas, possible buildings for nZEB tender	Municipal decision to join AIDA

Ms. Skitsa Vasiliki, Ms. Xrisikopoulou Eleni Mr D. AMitsis Ms Toloudi	Phone, oral	General Study Tour	CRES	General Cooperation in AIDA, in response to 21OTA Call, Interest in participation in WP3, technical issues about nZEB buildings	Signed agreement nZEB Building proposed for tender
Mr Grigoris Kalampoukas Chrysanthi Kiskini	Phone, e-mail	General Study Tour	CRES	Information about nZEB Participation of Region of Central Macedonia in promoting AIDA to municipalities Policies for promoting nZEB	Invitations sent for 2 nd Study Tour to municipalities, Interest in general information and collaboration about nZEB
Ms. Irene Tsakiridou	Oral, phone, e-mail	General	CRES	General info about AIDA How to involve municipalities	Promotion of 2 nd Study tour and AIDA material
Ms Kassiani Partzali	Oral, phone, e-mail	General Study Tour	CRES	General Cooperation with municipality of Ampelokipi-Menemeni, possible buildings for nZEB tender	Municipal decision to join AIDA
Ms Smaro Georgiadou, Ms A. Tsikoti, Mr I. Minadis	Oral, phone, e-mail	General, Study Tour	CRES	General info about AIDA Support to SEAP development Technical specifications for low energy buildings	Participation in WP4 nZEB in SEAP of Municipality of Thessaloniki
Mr Marina Vassilopoulou	Oral, e-mail	General	CRES	General information about nZEB buildings	Information about low energy school buildings Possible cooperation in WP3
Mr Polychroniadis Ms Theodorakopoulou	Phone, e-mail	General Study Tour	CRES	General information about AIDA and Study Tours	Participation in Study Tour General interest in AIDA outcomes and implementation in Municipality of Neapoli-Sykies
Ms Kiki Sai	Phone	Study Tour	CRES	General interest about AIDA	Presentation of building of Municipality of Pilea-Hortiati for Study Tour

Mr. Konstantakopoulos Manolis	Oral	General	CRES	General interest in AIDA from the Municipality of AgiaParaskevi	Participation in meeting in response to 21OTA call
Ms.Georgopoulou Stamatina	Oral	General	CRES	General interest in AIDA from the Municipality of Papagou-Holargos	Participation in meeting in response to 21OTA call
Mr. Manasis Giannis	Oral	General	CRES	General interest in AIDA from the Municipality of Vrilissia	Participation in meeting in response to 21OTA call
Ms.DimitraStavrou, Mr.Byron Samaropoulos	Oral	General	CRES	General interest in AIDA from the Municipality of Filothei-Psihiko	Participation in meeting in response to 21OTA call
Ms Alexandra Alexandropoulou	Oral	General	CRES	General interest in AIDA from the Municipality of Halandri	Participation in meeting in response to 21OTA call
RURENR Network	Oral	Workshop at Meze Autumn University of the Négawatt Association	HESPUL	General interest in AIDA	strenghtened partnership with RURENR
TEPOS Network	Oral	Workshop at Meze Autumn University of the Négawatt Association	HESPUL	General interest in AIDA	strenghtened partnership with RURENR
Dominique Gauzin Muller	Oral, email	Workshop at Meze Autumn University of the Négawatt Association	HESPUL	General interest in AIDA	Voralberg study tour
Julien BOURON, Benoit FOUQUEREAU of (Alisee Nantes)	Oral, email	presentation of the ecorenover.org tool	HESPUL	General interest in the tool, in HESPUL's and AIDA's activities	discussion of further cooperation
Mathieu LOONES (PACT ADRIM de la SOMME)	Oral	presentation of the ecorenover.org tool	HESPUL	General interest in the tool, in HESPUL's and AIDA's activities	discussion of further cooperation

Aline LEJART (<i>EIE BRETAGNE</i>)	oral, email	presentation of the ecorecover.org tool	HESPUL	General interest in the tool, in HESPUL's and AIDA's activities	discussion of further cooperation
Christine LEVAVASSEUR (<i>GRAPE BASSE NORMANDIE</i>)	email, oral	presentation of the ecorecover.org tool	HESPUL	General interest in the tool, in HESPUL's and AIDA's activities	discussion of further cooperation
